

Environmental Policy

Saïd Business School is a leader in management education, committed to safeguarding the environment and promoting a sustainable economic future. Sitting at the heart of the world-leading University of Oxford, we are uniquely placed to be able to enact positive change through education, research and our operations.

Our Environmental Policy sets out our pledge to:

- Comply with all applicable environmental legislation, regulations and obligations, and protect the environment.
- Maintain an ISO 14001 Environmental Management System and continually improve it to enhance our environmental sustainability performance.
- Achieve the environmental objectives set within the management system.
- Prevent all types of pollution and minimise negative environmental impacts.
- Reduce greenhouse gas emissions to help tackle the climate emergency.
- Incorporate environmental sustainability considerations in building design, refurbishment and use.
- Manage water consumption and resources responsibly and efficiently.
- To further embed the waste hierarchy on site.
- Encourage biodiversity across our estate.
- Promote sustainable travel options.
- Promote sustainable procurement practices.
- Provide healthy and sustainable food through our catering services.
- Embed environmental sustainability in our educational programmes, research, and networks.

The effectiveness and resourcing of the Environmental Policy and Environmental Management System will be reviewed annually by the Senior Leadership Group and Dean, and progress will be reported via an Annual Sustainability Report.

The Environmental Policy and Environmental Management System will be communicated to all levels of Saïd Business School and our stakeholders, to ensure environmental sustainability is embedded in every aspect of the School and our sphere of influence.
